(Cell Reports 42, 113563; December 26, 2023)

In the originally published version of this article, Figure 3C featured an incorrect image of H&E staining on the liver of a model mouse that was inadvertently imported into the graphic software. Although the article cannot be updated directly due to the time that has passed since its initial publication on December 12, 2023, the corrected Figure 3, with the proper H&E staining image for the model mouse liver in Figure 3C, can be seen below. This issue does not affect the conclusions of the paper. The authors regret this error.

**Figure 3.** *M. hyorhinis* infection promotes the development of HCC in a mouse model (corrected)
